PROFILE

AI Engineer with hands-on experience in Machine Learning, Generative AI, and Agentic AI. Skilled in building RAG pipelines, multi-agent systems, and LLM-powered applications using Python, LangChain, LangGraph, and Docker. Experienced in developing production-ready AI solutions, intelligent automation workflows, and scalable AI applications that solve real-world business challenges. Passionate about leveraging modern AI technologies to deliver impactful and innovative solutions.

TECHNICAL SKILLS

Agentic AI & Generative AI: AI Agents, Agentic Workflows, Multi-Agent Systems, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Prompt Engineering, Function Calling, Tool Calling

AI Frameworks & Orchestration: LangChain, LangGraph, LlamaIndex, Hugging Face, OpenAI API, Google Gemini API

Machine Learning & Deep Learning: Supervised & Unsupervised Learning, Deep Learning, Feature Engineering, Model Evaluation, Hyperparameter Tuning, Transfer Learning, Neural Networks

Programming & Development: Python, FastAPI, Streamlit, REST APIs, OOP, Git, GitHub

Deployment & Tools: Docker, Virtual Environments, Jupyter Notebook

PROFESSIONAL EXPERIENCE

Data Science Intern

Oct 2025 – Dec 2025

Growtechie

India

- Built scalable data preprocessing and feature engineering pipelines for structured datasets used in predictive analytics and machine learning workflows.
- Developed, trained, and evaluated supervised machine learning models using Python and Scikit-Learn while applying statistical evaluation techniques for performance optimization.
- Conducted exploratory data analysis (EDA), visualization, and business insight extraction using Pandas, NumPy, and Matplotlib to support data-driven decision-making.

KEY PROJECTS

Multi-Agent AI Research Agent | GitHub

- Engineered a Multi-Agent AI Research Assistant using LangGraph, LangChain, Groq, and Tavily Search, enabling autonomous research, intelligent workflow orchestration, and real-time information retrieval..
- Built a RAG-powered document intelligence platform with ChromaDB, vector embeddings, and Streamlit, delivering contextual PDF question answering, conversational memory, source citations, and Dockerized deployment.

Agentic AI Coding Assistant | GitHub

- Built an Agentic AI Coding Assistant using LangGraph, LangChain, Groq, Streamlit, and Docker, implementing a multi-agent workflow for planning, research, code generation, review, testing, and documentation.
- Integrated GitHub Search, Web Search, memory-enabled agents, and LangGraph orchestration to deliver context-aware responses, real-time research, intelligent tool routing, and automated end-to-end software development workflows.

Document QnA Bot using RAG | GitHub

- Built an AI-powered Document QnA system using Python, LangChain, Groq, Streamlit, and RAG architecture, enabling context-aware question answering over PDF documents.
- Implemented semantic retrieval with Sentence Transformers, vector search, and modular architecture, improving information retrieval accuracy while ensuring deployment readiness through Docker containerization.

EDUCATION

Laxman Devram Sonawane College

Bachelor of Science in Information Technology

June 2022 – Feb 2025

Kalyan, Maharashtra

Vivekanand Education Society's Polytechnic

Diploma in Mechanical Engineering

Jan 2018 – Aug 2021

Mumbai, Maharashtra
