PROFESSIONAL SUMMARY

Generative AI and Machine Learning Engineer with hands-on experience building Retrieval-Augmented Generation (RAG) systems, transformer-based NLP models, and deep learning pipelines. Strong foundation in Python, model evaluation, vector databases, and LLM-based applications using LangChain and FAISS. Focused on developing reliable, scalable AI solutions through experimentation, evaluation, and iterative improvement.

TECHNICAL SKILLS

Generative AI & NLP: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Prompt Engineering, Transformers, BERT

Machine Learning & AI: Supervised & Unsupervised Learning, Deep Learning, Model Evaluation, Feature Engineering, Hyperparameter Tuning, Transfer Learning

Frameworks & Libraries: Python, TensorFlow, Scikit-learn, Keras, Hugging Face, LangChain, LlamaIndex

Data & Visualization: Pandas, NumPy, Matplotlib, Seaborn, Exploratory Data Analysis (EDA)

Vector Databases & Tools: FAISS, Pinecone, Chroma, Docker, Google Gemini API

PROFESSIONAL EXPERIENCE

Data Science Intern

Oct 2025 – Dec 2025

Growtechie

India

- Preprocessed, cleaned, and engineered features from structured datasets, improving data quality and consistency for downstream machine learning tasks
- Built and evaluated supervised machine learning models using Python and scikit-learn, applying metrics such as accuracy, precision, recall, and F1-score
- Performed exploratory data analysis (EDA) to identify trends, correlations, and anomalies, supporting data-driven insights
- Iteratively improved model performance through feature refinement and validation techniques under mentor guidance

KEY PROJECTS

Brain Tumor Detection System

- Developed a CNN-based medical image classification model using transfer learning in TensorFlow to analyze MRI scans
- Evaluated model performance using accuracy and validation loss to ensure generalization across unseen samples

Twitter Sentiment Analysis

- Built an NLP pipeline using BERT-based transformers to classify sentiment in social media text
- Implemented text preprocessing, tokenization, and model inference for batch and real-time predictions

Document Intelligence System (RAG)

- Designed and implemented a Retrieval-Augmented Generation (RAG) system using LangChain, Google Gemini LLM, and FAISS
- Generated vector embeddings for document chunks to enable semantic search and contextual question answering
- Improved response relevance by combining dense retrieval with LLM-based answer generation

EDUCATION

Laxman Devram Sonawane College

Bachelor of Science in Information Technology

June 2021 – July 2024

Kalyan, Maharashtra

Vivekanand Education Society's Polytechnic

Diploma in Mechanical Engineering

Jan 2018 – Aug 2021

Mumbai, Maharashtra

CERTIFICATIONS

Google Cloud Platform - Generative AI Studio

Cognitive Class - Deep Learning Certificate
